

VULNERABILITY ASSESSMENT REPORT

Reconnaissance & Vulnerability Scanning – Task 1

□ Prepared by	Dimple kumari
□ Internship	Cyber Security Internship
□ Date	15-05-2026
□ Target	scanme.nmap.org
□ Tools used	Nmap, Nikto

1. Introduction

This report documents the reconnaissance and vulnerability scanning performed on the target website scanme.nmap.org using Nmap and Nikto tools. The purpose of this task is to identify open ports, running services, and possible security vulnerabilities.

2. Scope & Methodology

Target: scanme.nmap.org

Operating System: Kali Linux

Tools Used:

1. Nmap

2. Nikto

Methodology:

1. Port Scanning
2. Service Enumeration
3. Vulnerability Scanning
4. Result Analysis

3. Nmap scan Result

command : `nmap -sV --version-intensity 0-T4 csanme.nmap.org`

port	state	service	version
22	open	SSH	OpenSSH
80	open	HTTP	Apache
2.4.7			
9992	open	nping-echo	Nping
31337	open	tcpwrapped	Protected
service			

4. Nikto Scan Result

Command used: `nikto -http://scanme.nmap.org`

Severity	Vulnerability
Medium	Apache mod_negotiation enabled
Medium	Missing security headers
Low	Information disclosure

5. Risk Summary

Severity	Count
High	0

Medium	2
Low	1

6. Recommendations

1. Upgrade Apache server version.
2. Add missing security headers.
3. Disable unnecessary modules.
4. Perform regular vulnerability assessments.

7. Conclusion

The vulnerability assessment identified several security weaknesses on the target system. Regular security assessments help improve the security posture of web applications and reduce cyber security risks.
